

A Global Consciousness Response to Nurses' Global Coherence

A world-wide celebration of Nurses' Global Coherence 2020, on Florence Nightingale's 200th birthday, May 12 2020, focused attention through meditation and prayer at noon in all time zones. People were encouraged to share a meditation provided in several languages. This is the English version:

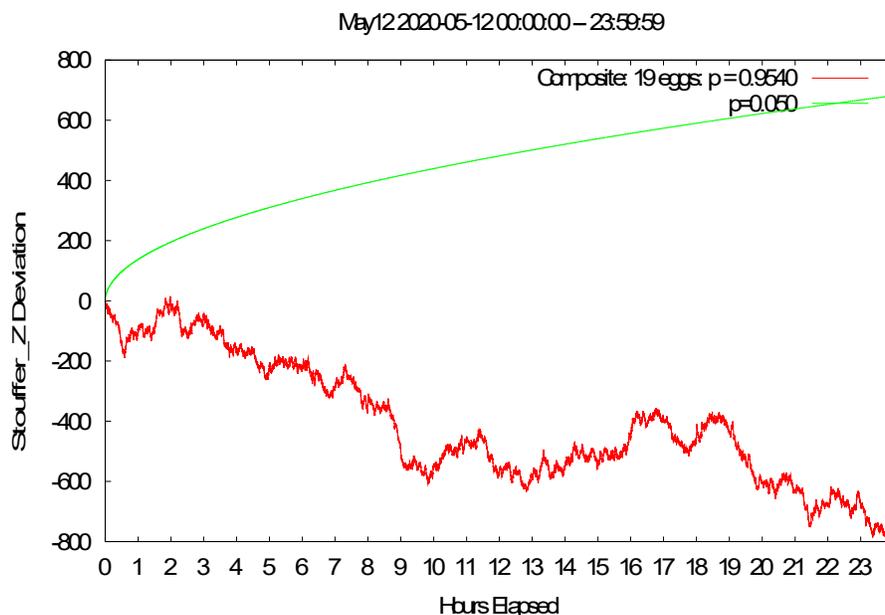

"In this time of need, let us honour the heart of humanity and global caring. On Florence Nightingale's 200th birthday (May 12th), during the 2020 Year of the Nurse and the Midwife, we - the nurses, midwives, and concerned citizens of our global family - share a vision of universal health care and a healthy world for all.

Now, let us come together with one heart, one mind and one world, to create a shared future of compassion and love.

Bring your attention to your heart. Imagine your breath flowing in and out of your heart. Breathing a little deeper... experience a feeling of calm, compassion, love and caring... and breathe those feelings through the heart area.

Gently radiate these feelings for health and well-being to ourselves, our families, our communities and our world. "

The [Global Consciousness network](#) remains operational, though its formal experimental series ended a few years ago. We can explore the data in analyses that may show a response to big events in the world. Because this meditation/prayer was set for “noon, wherever you are” we assessed the 24 hour UTC day. The graph below shows the result. The jagged data line indicates inter-device correlation across the network, rather than random behavior. The steady trend has about 20 to 1 odds against being just chance fluctuation. A downward trend in the deviations is often seen during mass meditation events.

GCP data response during Nurses' Global Coherence 2020
